

ICS Embedded Player now features expanded options

Product	Internet Captioning Service (ICS) Embedded Player
Bulletin #	ICS.17
Date Issued	22 March 2018
Release Version	ICS Cloud Embedded Caption Player 3.3

What's New:

VITAC has added two additional configuration options to the ICS embedded player. Customers may now configure the player so that users can see the full transcript even when joining an event late. They can also allow users to adjust font size by using the embedded toolbar.

- **Full Transcript View:** Users joining an event late can scroll backwards to see the full transcript. To configure this option in the embedded player, customers will set the "Fullview" parameter to "True." A sample of the full-view player can be found [here](#).
- **Font Size:** Users may make the font larger and smaller by selecting an option on the embedded toolbar. To configure this option in the embedded player, customers will set the "ShowEmbedToolBar" to "True." The toolbar contains three or four buttons:
 - Pause the caption scrolling
 - View Transcript in a separate window (this is not an option when "fullview"="true")
 - Enlarge font
 - Reduce font

A sample of the Embedded toolbar can be found [here](#).

Documentation:

Details on these updated, advanced features, may be found on the captionedtext.com website: <https://www.captionedtext.com/configuration.aspx>
